Spring Graduate Course: COLLABORATION & TEAM SCIENCE

This course provides an overview of the Science of Team Science (SciTS) for investigators who are (or will be) working in transdisciplinary teams. In addition to examining the theoretical and research literature on the dynamics of teams, the course will include an examination of the construction and maintenance of high functioning teams. Tools and exercises for assessing and improving team skills will provide hands-on experiences for learners. The course will include discussions about institutional barriers to working in teams and strategies for overcoming these and other challenges faced by translational researchers navigating in a team-based environment.

COURSE INSTRUCTOR

Jack Kues, PhD, Professor Emeritus
Director of the Center for Improvement Science
Associate Dean for Research Evaluation, UC COM
